

Nandini Udayakumar

Cybersecurity Engineering Student | George Mason University

Location: Chantilly, Virginia 20152 | Phone: 703-867-5627 | Email: nandini.uk04@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Cyber Security Engineering student at George Mason University with hands-on experience in IT operations, security auditing, access control, and Python-based cybersecurity projects. Skilled in Python, Linux, technical documentation, and analytical problem-solving through academic projects and applied work. Actively seeking internships in Cybersecurity and Enterprise IT to build hands-on experience.

CORE COMPETENCIES

Cybersecurity Principles • Network Security • Threat Analysis • Risk Assessment • Incident Response • Access Control Management • Vulnerability Identification • System Hardening • Security Auditing • Python Programming • Data Analysis • Linux Administration • Secure Software Engineering • Cryptography Fundamentals • Technical Documentation • Process Improvement • Security Operations • Problem Solving

EDUCATION

Bachelor of Science in Cyber Security Engineering | George Mason University — Fairfax, VA | Graduation: December 2026

- **Related Courses:** Computer Programming for Engineers, Computing for Digital Systems, Computer Networking, Operating Systems, Critical Infrastructure Protection, Secure RF Communications, Secure Software Engineering, Cryptography Fundamentals, User Experience Engineering, Systems Security and Resilience, Cyber Vulnerability
-

PROFESSIONAL EXPERIENCE

IT Operations Intern | Renovics LLC — Ashburn, VA | November 2025 – Present

- Oversee daily IT operations, assign technical tasks, monitor system performance, and coordinate with staff, customers, and vendors to resolve service requests and maintain system reliability.
- Maintain documentation including task logs, vendor records, and service tickets, and identify process improvement opportunities to enhance operational efficiency and service delivery.

Security Professional | QTS Data Centers — Ashburn, VA | July 2025 – Present

- Monitor and enforce access control for secure data halls and restricted areas, verify credentials, review visitor logs, and ensure compliance with entry and escort protocols to prevent unauthorized access.
- Conduct security audits, inspect surveillance and access systems, and document findings to support risk assessments, incident reporting, and operational readiness.

Private Tutor | Enrich and Excel — Chantilly, VA | August 2024 – January 2026

- Provide individualized instruction for K–12 students, develop lesson plans tailored to academic goals, and track performance to support measurable learning outcomes. Lead group and one-on-one sessions to strengthen problem-solving and comprehension skills, adjust strategies based on progress, and communicate results to parents or guardians.

Student Teacher | EduTutorVA — Fairfax, VA | August 2022 – June 2023

- Designed and delivered lesson plans aligned with Fairfax County curriculum standards, adapted materials for online instruction, and used interactive tools to support engagement. Assessed student performance, provided targeted feedback, and collaborated with educators to refine instructional methods and improve overall learning outcomes.
-

PROJECTS AND LEADERSHIP

AVINT — Cybersecurity Capstone Project | Remote | Herndon, VA | August 2025 – Present

- Partnering with Avint on a year-long senior design project to analyze cybersecurity workflows and build a Python-based solution with web scrapers and an NLP pipeline that improves threat detection and reporting efficiency through open-source data collection and structured analysis.

HackFax x PatriotHacks — Developer, Web Attacks Track | George Mason University, Fairfax, VA | February 2025, February 2026

- Designed and tested intentionally vulnerable web applications in a CTF-style competition, executing SQL injection, XSS, and broken access control attacks to identify and mitigate web security vulnerabilities.

PatriotHacks Hackathon — Participant | George Mason University, Fairfax, VA | October 2023, October 2024

- Built a web-based application using HTML, Tableau, and AWS to match students' academic majors with career interests, collaborating with a team to design, develop, and deploy a functional product within event deadlines.
